## Force Diagrams Part 2

Name: \_\_\_\_\_ Block: \_\_\_\_\_

Recall that a Force Diagram is a sketch that shows all of the forces acting on an object. There are five basic forces that we have been working with: applied ( $F_A$ ), friction ( $F_f$ ), tension ( $F_T$ ), gravity ( $F_g$ ), and normal ( $F_N$ ). In each of the scenarios below, read the situation and then draw a force diagram that shows all of the forces acting on the object. For example, an airplane is flying at a constant velocity in level flight. The force diagram would look like this:

<p>1. A bird sitting motionless on a perch.</p> 	<p>Force Diagram:</p>
<p>2. Draw a force diagram for a hockey player, moving at a constant velocity, across frictionless ice.</p> 	<p>Force Diagram:</p>
<p>3. Draw a force diagram for a baseball player who slows as he slides into the base.</p> 	<p>Force Diagram:</p>

4. Draw a force diagram for the chandelier which is suspended from the ceiling by a chain.

Force Diagram:

5. Draw a force diagram for the bucket of water that is being raised from the well at a constant velocity.

Force Diagram:

6. Draw a force diagram for a skydiver who has just left the plane and is accelerating toward the ground.

Force Diagram:

7. Draw a force diagram for a skydiver who is descending at a constant velocity.

Force Diagram:
