## <u>Part 2</u>

- 1. I can investigate and apply Newton's Laws to <u>vehicle restraints</u>.
  - a. Go to <u>http://regentsprep.org/Regents/physics/phys01/accident/default.htm</u>
  - b. Choose one of the eight videos and observe Newton's Laws in relation to car crashes.
  - c. Describe all the ways that Newton's Laws can apply in a car crash.

d. Compare and contrast the results of a crash while the passengers are **not** wearing seat belts and while they are wearing seat belts.

<ul> <li>2. I can investigate and apply Newton's Laws to <u>sports activities</u>.</li> <li>a. Go to <u>http://www.exploratorium.edu/baseball/scientificslugger.html</u> The Scientific Slugger.</li> <li>b. Read and fill in the blanks: The distance a baseball travels depends on primary factors: the</li> </ul>						
	at	t which the ball le	eaves the bat, a	nd how	the ball is	
	hit. The of the ball depends on both the speed of the					
	and the spee	ed of the	. <u></u> •			
	Gravity is alv	ways pulling	on the ba	III. If you hit the	ball straight	
	up, it spends quite a bit of time in the air, but doesn't travel far from home					
	plate. If you hit the ball horizontally, as in a line drive, the ball moves away					
	from home plate at maximum velocity, but quickly hits the ground because					
	of still not very far from home plate. To maximize your hitting					
	, you need to have both a high horizontal AND you					
need to keep the ball in the air for a time. You can do this						
by hitting the ball at an angle.						
c. Try to hit a home run. Change one variable at a time. Record each of your variables below.						
Type of pitch	Pitch speed	Angle of the ball	Bat speed	Distance	Result? (homerun or not?)	

Type of pitch	Pitch speed	Angle of the ball	Bat speed	Distance	(homerun or not?)

- 3. I can investigate and apply Newton's Laws to <u>amusement park rides</u>.
  - a. Go to <u>http://www.learner.org/interactives/parkphysics</u> Amusement Park Physics
  - b. Read and answer the questions:
    - i. What activities are more dangerous than riding an amusement park ride?
    - ii. What drives the motion of a roller coaster?
    - iii. Name the three types of wheels on a roller coaster car.
    - iv. Compare and contrast wooden vs. steel roller coasters:

- c. Click the icon in the text that says 'Design a Roller Coaster'
  - i. List the constants for the experiment
  - ii. Click 'begin'
    - 1. Height of first hill \_\_\_\_\_
    - 2. Slope of the hill \_\_\_\_\_
    - 3. Exit path \_\_\_\_\_
    - 4. Height of the second hill \_\_\_\_\_
    - 5. Shape of the loop \_\_\_\_\_
  - iii. Did your roller coaster pass the safety test?
  - iv. Did your roller coaster pass the fun test? \_\_\_\_\_

4.	a.	Investigate and apply Newton's Laws to <u>tectonic activities</u> a. Go to <u>http://www.jclahr.com/science/earth_science/animate/</u> b. At the bottom of the page, click on the link for the Quicktime video. Play the					
video and answer the questions.							
	i. Which of Newton's laws applies to the rock that gets stuck while the table of table o					stuck while the	
plate is subducting into the mantle?							
ii. Which law causes the land to bulge up above the subducting					ducting plate?		
iii. Which law causes tsunamis to occur water?							es take place in the
	iv. Explain the energy transformations involved when the plate subducts and creates an earthquake.					e plate subducts	
			<u> </u>				
<ol> <li>Investigate and apply Newton's Laws to <u>rocket launches</u> <ul> <li>Go to <u>http://www.sciencenetlinks.com/interactives/gravity.html</u> and click `start'</li> <li>You will have five different missions – to dock the rocket at the orbiting space station. For each trial, change the amount of thrust and the angle of the launch. Press the launch button to test your variables. Record variables for successful launches below:</li> </ul> </li> </ol>							
Round	1			Thrust		Angle
